

VGA Extender with Audio by UTP

VGAE02-SRL

The VGA Extender with Audio by UTP is a device that combines extender and splitter functions which is ideal for local display and remote viewing. The input VGA and audio signals are sent to the output at the same time by ordinary, inexpensive Cat5e/6 cable wherein the receiver works as a set with the sender, and transmitted to the VGA display up to a maximum of 300M.

FEATURES

- Supports up to 1920 x 1200 video resolution
- Supports dual outputs, one for VGA output at local site and another for UTP output at remote site
- Supports VGA video and stereo audio signals up to a maximum of 300M with one UTP Cat5e/6 cable
- Supports HDTV, flat panels, and monitor projectors
- Supports Gain (brightness) and Peak (skew) adjustments for different UTP cable length
